

TYE DYE CANDY!

Make sure to use Adult Supervision!

What you'll need:

- Shallow Plate
- 1/2 Cup of Warm Water
- Skittles

Directions

1. In the shallow bowl/plate, place your skittles in a circle around the edge of the plate
2. Pour the warm water directly in the middle of the plate. You may not need all of the water, but enough to coat the entire plate.
3. Watch and wait!

THE SCIENCE BEHIND IT

The water is dissolving the sugar and coloring that coats the Skittles. Because sugar water is more dense than regular water, it spreads to the middle of the plate quickly!
